
SWITCHING TO KOMSTADT

The 30-day onboarding plan

Switching providers, without the horror stories. A structured takeover in defined phases — so nothing falls through the cracks and your staff barely notice. Smaller environments typically complete in weeks, not months.

- 1 Week 1 — Survey & audit.** We inventory every device, server, licence and network element, review your setup and identify the top risks. Nothing is assumed.
- 2 Week 1–2 — Knowledge transfer.** Structured handover from your outgoing provider, and we build a full configuration database (CMDB) of assets, configs and credentials.
- 3 Week 2–3 — Shadow & parallel run.** Our engineers practise supporting your environment alongside the current arrangement until agreed benchmarks are met — no gap in cover.
- 4 Week 3–4 — Go-live.** Your SLA-backed helpdesk goes active, monitoring and security are deployed, and we take full accountability.
- 5 Day 30 — Review.** A formal post-cutover review confirming everything is documented, secured and monitored, with your first report and strategy review booked.

What you own at cutover

- ✓ A complete technical runbook for your environment
- ✓ A configuration database (CMDB) of every asset and system
- ✓ Standard operating procedures and a security baseline

A switch that de-risks your IT rather than disrupting it. Start with the free assessment — email enquiry@komstadt.com.
